FICTIONAL BUSINESS BANK TRANSACTION STATEMENT

SYNTHETIC TEST DATA • NO REAL PEOPLE, COMPANIES, ACCOUNTS, CARDS, OR FINANCIAL INFORMATION

Organization	Kairos Labs	Industry	Software / Technology
Currency	USD	Reporting Period	January 1, 2026 – January 31, 2026
Document Type	Fictional Business Bank Transaction Statement	Statement Status	Test / Synthetic
Primary Account	Operating Account **** 7711	Card Account	Corporate Card **** 1042
Payroll Account	Payroll Account **** 3328	Prepared For	LedgerPilot transaction-processing QA

Statement overview

This synthetic statement contains 38 mixed business transactions across operating expenses, revenue, refunds, transfers, subscriptions, travel, equipment, and ambiguous merchants. It intentionally includes normalization variants, duplicate candidates, confidence edge cases, and anomalous amounts for LedgerPilot extraction and operations testing.

Transaction Register										
Trn ID	Date	Vendor / Merchant	Description	Amount	Curr.	Type	Payment	Account	Category	Notes

	01/30/26	Misc. Vendor	Miscellaneous business purchase	\$-510.00	USD	Debit / Expense	Corporate Card	Operations **** 1042	Uncategorized	Human review • unusual but valid date

in ID	Date	Vendor / Merchant	Description	Amount	Curr.	Type	Payment	Account	Type	Category	Notes
	2026-01-31	Annual Contract Payment	Annual contract payment #AC-220	\$15,000.00	USD	Credit / Revenue	Wire	Operating Account **** 7711		Revenue	High confidence

Transaction Notes & QA Test Cases

Test area	Expected behavior
Vendor normalization	AWS / AMZN AWS → Amazon Web Services; OpenAI * API → OpenAI API; Google Cloud Platform → Google Cloud; Figma Inc. → Figma; Slack Technologies / Slack; Notion Labs Inc. / Notion.
Duplicate detection	TXN-1016 and TXN-1017 are intentionally near-identical Figma charges on the same date and amount. They are the primary duplicate candidate pair.
Ambiguous categorization	TXN-1026 through TXN-1029, TXN-1032, TXN-1034, and TXN-1037 should be routed to human review rather than confidently inferred from merchant text alone.
Refund handling	TXN-1030 is a negative Adobe refund. It should be recognized as a refund and excluded from ordinary expense totals when calculating net operating spend.
Anomaly handling	TXN-1010 is a legitimate but unusually large \$8,500 equipment purchase. It should be flagged for anomaly awareness without being rejected.
Edge cases	TXN-1032 is a \$0.99 transaction; TXN-1034 has a missing description; TXN-1033 uses an abbreviated vendor name; TXN-1037 uses MM/DD/YY date formatting; TXN-1035 resembles another Google Cloud transaction but is a distinct charge.
Transfer handling	TXN-1029 is an internal transfer and should not be treated as an operating expense.

Financial Summary

Metric	Value
Total number of transactions	38
Total expenses	\$-28,335.60
Total revenue	\$30,250.00
Total refunds	\$59.99
Net cash movement	\$378.22
Software / Cloud transactions	13
Marketing transactions	2
Travel transactions	2
Payroll transactions	1
Professional Services transactions	2
Transactions requiring human review	7
Likely duplicate transactions	2

LedgerPilot Test Coverage

Coverage	Included test signals
CSV/PDF extraction	Structured 11-column transaction register; mixed dates; blank description; negative amounts; credits and debits.
Vendor normalization	AWS / Amazon Web Services / AMZN AWS; OpenAI variants; Google Cloud variants; Figma variants; Slack and Notion variants.
AI categorization	Clear categories plus intentionally ambiguous merchants with Uncategorized source labels.
Human review	Seven low-confidence/ambiguous transactions explicitly marked for review.
Duplicate detection	Two same-day, same-amount Figma charges with slightly different vendor names.
Dashboard calculations	Expenses, revenue, refunds, net movement, category counts, review count, and duplicate count.
Edge-case resilience	Refund, \$8,500 anomaly, \$0.99 transaction, missing description, abbreviated vendor, alternate date format, near-similar legitimate charge.

Synthetic Data Notice

This document is entirely fictional and generated for product testing. All names, merchants, identifiers, account references, amounts, invoice references, and transaction details are synthetic. No real financial account, payment card, person, business, or banking information is represented.
